

This mechanical bridge crane is used for safe and efficient material handling.

Quality assurance services are available to meet your specific standards. Process and testing results are documented and special templates are used to ensure products measure up to your requirements.

We offer shipping solutions to fit your budget and timeline. Whether you choose our fleet of trucks or another carrier, you can trust our scheduling staff to efficiently manage your shipments.

With rotational, injection and blow-molding production facilities on-site, Den Hartog Industries has the capabilities and experience to combine both metal and plastic parts into your finished product. Whether your project is simple or complex, our divisions can provide all the components you need to make it a success.

Den Hartog Industries

was founded as a metal fabricator

in 1976. Since that date,

customers from various industries

have depended on Sowjoy,

a division of Den Hartog Industries,

to turn their custom metal product

into reality. We offer years of

experience and a variety of

services, including part prep,

assembly and powder coating.

Our technicians fabricate with

several types of steel, including

carbon steel and stainless steel.

Solid Reputation

We have a nationwide reputation for quality metal products produced under these brands

Den Hartog Industries offers that same standard of excellence for your custom product.

CUSTOM PRODUCTS FOR CUSTOM IDEAS ...

Den Hartog Industries produces custom products that meet and exceed our customers' unique needs.

Den Hartog Industries takes the time to understand your needs and helps develop your concept into an economical and practical solution. We are happy to answer all your questions and provide you with a timely quote.

One of our value added services is ► **powder coating**. It is available in a variety of colors, including custom color matching. The powder coat finish will not fade, chip, scratch or show drip marks, which results in a smooth, long-lasting surface.

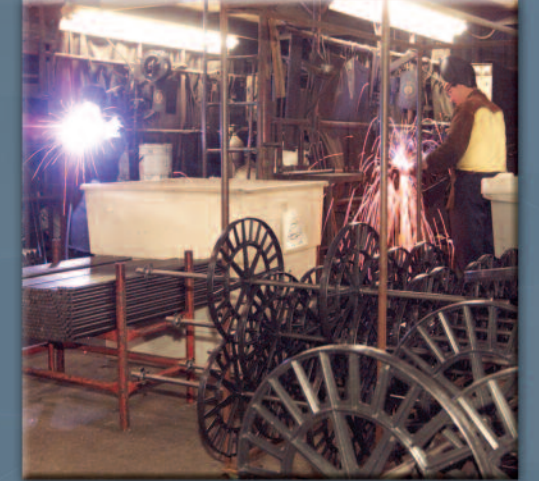

▲ A custom color of powder is sprayed onto the parts. The parts are then placed in the oven where the powder is "baked" onto the metal.

◀ Our new AKS 24 ft. long, high-definition plasma cutting table allows high volume shape cutting of stainless steel and mild steel sheets.

▲ Our Robotic welding cell enables us to produce high volume parts with precision.

▲ Assembly, as a secondary operation, is also available. We provide wire feed welding for stainless and carbon steel materials. Other secondary options include galvanizing and packaging.

PART PREPARATION

Shearing a sheet of metal.

Rolling tubing to create a hoop.

Den Hartog Industries has the capabilities to offer many metal fabrication services that include sawing, shearing, shape cutting, piercing, punching, drilling and forming. We can roll metal sheets, channel, tube or pipe. Our years of experience and focus on quality provide you the expert workmanship you deserve.

TOOL & DIE CONSTRUCTION

Our team of experienced mold fabricators provide economical tooling services for both cast aluminum and stainless steel construction.
